

Side Loading Washing Machines Steam or Electrically Heated

SEVE Side Loading Washers are able to serve many purposes.

All models are manually operated and have no spin/extraction capability therefore a separate Hydro Extractor is needed for water extraction at the end of a wash process.

They can be custom modified to customer's requirements.

SL / E Models are available with electric heating.

The N models are fully stainless steel, including the side panels and have semi automatic control.

All models have automatic reversing drums and cycle timers.
